

DIAGNOSTIC PATHWAYS: GUIDELINES FOR IMPROVING DIAGNOSTIC ACCURACY

A Workshop with Gary G. Gintner, Ph.D., LPC-S

A WORKSHOP FOR MENTAL HEALTH PROFESSIONALS

Inaccurate diagnosis has many faces: over diagnosing normal behavior, under diagnosing psychopathology, and misdiagnosing one disorder for another. As a result, many may receive the wrong treatment or unnecessary care. This program reviews evidence-based diagnostic skills that have been shown to improve diagnostic accuracy. These critical thinking skills help guide the clinician through the complex diagnostic process. Applications to DSM-5-TR diagnostic issues are discussed including differential diagnosis, ruling out medical and substance-related problems, complex comorbidity and use of DSM-5-TR assessment measures. Special attention is paid to diagnostic issues with ethnoracial and other marginalized groups. Throughout participants are provided with case studies to help them apply these critical thinking skills.
